Section 1  An introduction to Visual Studio

Chapter 1  How to get started with Visual Studio

An introduction to .NET development ..............................................4
.NET applications ...............................................................................4
Visual Studio and the .NET programming languages .......................6
The .NET Framework .......................................................................8
The Visual Studio IDE .....................................................................10
How a C# application is compiled and run .....................................12
How C# differs from the other .NET languages ..............................12
How C# differs from Java ................................................................12

A tour of the Visual Studio IDE ...................................................14
How to start Visual Studio ...............................................................14
How to open or close an existing project ........................................16
Some possible menu variations .......................................................16
How to use the Form Designer .........................................................18
How to use the Code Editor ..............................................................20
How to use the Solution Explorer ...................................................22
How to work with Visual Studio’s windows ....................................24

How to test a project ....................................................................26
How to build a project .....................................................................26
How to run a project .......................................................................26

How to upgrade projects and change .NET Framework versions .......28
How to upgrade projects created in earlier versions of C# ...............28
How to change the .NET Framework version used by a project .........30

Chapter 2  How to design a Windows Forms application

How to set options and create a new project .................................36
How to set the Visual Studio options ..............................................36
How to change the import and export settings ...............................36
How to create a new project ............................................................38

How to design a form ....................................................................40
The design of the Invoice Total form ..............................................40
How to add controls to a form .......................................................42
How to set properties ....................................................................44
Common properties for forms and controls ....................................46
How to add navigation features ......................................................48
The property settings for the Invoice Total form ..............................50
How to use Document Outline view ..............................................50

How to name and save the files of a project .................................52
How to name the files of a project ................................................52
How to save the files of a project ..................................................52

Chapter 3  How to code and test a Windows Forms application

An introduction to coding ..............................................................58
Introduction to object-oriented programming ....................................58
How to refer to properties, methods, and events .............................60
How an application responds to events .........................................62
Section 2 The C# language essentials

Chapter 4 How to work with numeric and string data

How to work with the built-in value types ........................................ 100
The built-in value types ................................................................... 100
How to declare and initialize variables .......................................... 102
How to declare and initialize constants ........................................... 102
How to code arithmetic expressions .............................................. 104
How to code assignment statements ............................................ 106
How to work with the order of precedence .................................... 108
How to use casting ........................................................................ 110
How to use the Math class ............................................................ 112

How to work with strings ............................................................. 114
How to declare and initialize a string ............................................ 114
How to join and append strings .................................................. 114
How to include special characters in strings ............................... 116

How to convert data types ............................................................. 118
The .NET structures and classes that define data types ................. 118
How to use methods to convert data types ................................. 120
How to use methods to convert numbers to formatted strings .......... 122

Three other skills for working with data ..................................... 124
How to work with scope ............................................................... 124
How to declare and use enumerations ......................................... 126
How to work with nullable types and the null-coalescing operator .... 128

Two versions of the Invoice Total application ............................ 130
The basic Invoice Total application ............................................ 130
The enhanced Invoice Total application ....................................... 132
How to use Tab Order view to set the tab order .........................................................296
How to get the information you need for using a control ...........................................298

**How to work with multi-form projects** ..........................................................300
How to add a form to a project ................................................................................300
The code that’s generated for a new form ..............................................................302
How to rename a form ..........................................................................................304
How to display the first form of an application ......................................................306
How to display a form as a dialog box ....................................................................308
How to pass data between a form and a custom dialog box ....................................310

**How to use the MessageBox class** .................................................................312
How to display a dialog box and get the user response ..........................................312
How to use the FormClosing event ......................................................................314

**The Payment application** ............................................................................316
The operation .......................................................................................................316
The property settings .........................................................................................318
The code for the Customer form .........................................................................318
The code for the Payment form ...........................................................................322

**Chapter 11 How to debug an application**

**Basic debugging techniques** ........................................................................330
How to set the debugging options .........................................................................330
How to work in break mode ................................................................................332
How to use the Edit and Continue feature ..........................................................332
How to work with data tips ................................................................................334
How to use breakpoints .......................................................................................336
How to control the execution of an application ....................................................338

**How to use the debugging windows** .............................................................340
How to use the Locals window to monitor variables .............................................340
How to use the Autos window to monitor expressions ..........................................340
How to use the Immediate window to execute commands ....................................344
How to use the Call Stack window to monitor called methods ................................346
How to use the Call Hierarchy window to navigate through your code .................348
How to use the Output window to view project information ................................350
How to write data to the Output window ............................................................352
How use the Visualizer dialog boxes to view strings ............................................354

**Section 3 Object-oriented programming**

**Chapter 12 How to create and use classes**

**An introduction to classes** ............................................................................362
How classes can be used to structure an application ............................................362
The members you can define within a class .........................................................364
The code for the Product class ............................................................................366
How instantiation works ......................................................................................368

**Basic skills for creating a class** ......................................................................370
How to add a class file to a project ....................................................................370
How to code fields .............................................................................................372
How to code properties ......................................................................................374
How to code methods .........................................................................................376
How to code constructors ..................................................................................378
How to code static members .............................................................................380
Chapter 13  How to work with indexers, delegates, events, and operators

An introduction to the ProductList class ............................................. 410
The code for a simple ProductList class .............................................. 410
The specifications for the enhanced ProductList class .................... 412

How to work with indexers ............................................................. 414
How to create an indexer ................................................................. 414
How to throw an argument exception ............................................. 416

How to work with delegates and events ......................................... 418
How to define and use a delegate ..................................................... 418
How to define and use events .......................................................... 420
How to use anonymous methods and lambda expressions with delegates and events ................................................................. 422

How to overload operators ............................................................. 424
An introduction to operator overloading .......................................... 424
How to overload arithmetic operators ............................................. 426
How to overload relational operators ............................................. 428

An enhanced version of the Product Maintenance application .......... 430
The code for the ProductList class .................................................. 430
The code for the Product Maintenance form .................................... 434

Chapter 14  How to work with inheritance

An introduction to inheritance ......................................................... 440
How inheritance works ................................................................. 440
How the .NET Framework uses inheritance .................................... 442
Methods inherited from the System.Object class ......................... 444
How to use inheritance in your applications .................................. 446

Basic skills for working with inheritance ....................................... 448
How to create a base class ............................................................. 448
How to create a subclass ............................................................... 450
How polymorphism works ............................................................ 452

An inheritance version of the Product Maintenance application ........ 454
The operation of the Product Maintenance application .................. 454
The code for the Product, Book, and Software classes ................. 456
The code for the ProductList class ................................................................. 460
The code for the Product Maintenance form ................................................ 462
The code for the New Product form ............................................................... 464

**Object types and casting** ............................................................................. 466
How to use the Type class to get information about an object’s type ............ 466
How to use casting with inheritance .............................................................. 468

**How to work with abstract and sealed classes** ....................................... 470
How to work with abstract classes .............................................................. 470
How to work with sealed classes ................................................................. 472

**Chapter 15** How to work with interfaces and generics

**How to work with interfaces** ................................................................. 478
An introduction to interfaces ........................................................................ 478
Some of the interfaces defined by the .NET Framework .............................. 480
How to create an interface ........................................................................... 482
How to implement an interface ................................................................. 484
A Product class that implements the ICloneable interface ......................... 486
How to use an interface as a parameter ..................................................... 488

**How to work with generics** ........................................................................ 490
How to code a class that defines a generic collection .................................. 490
Some of the generic interfaces defined by the .NET Framework ................. 494
How to implement the IComparable<> interface ........................................ 496
How to use constraints .................................................................................. 498
How to implement the IEnumerable<> interface ......................................... 500
How to code an interface that uses generics .............................................. 502

**Chapter 16** How to organize and document your classes

**How to organize your classes** ................................................................. 508
How to code multiple classes in a single file .............................................. 508
How to split a single class across multiple files ......................................... 510
How to work with namespaces ................................................................. 512

**How to document your classes** ............................................................ 514
How to add XML documentation to a class .............................................. 514
How to view the XML documentation ...................................................... 516

**How to create and use class libraries** .................................................... 518
How class libraries work ............................................................................ 518
How to create a class library project ......................................................... 520
How to add a reference to a class library .................................................. 522
How to use the classes in a class library .................................................... 522

**Section 4** Database programming

**Chapter 17** An introduction to database programming

**An introduction to client/server systems** ................................................. 528
The hardware components of a client/server system .................................. 528
The software components of a client/server system .................................. 530

**An introduction to relational databases** .................................................. 532
How a table is organized ............................................................................ 532
How the tables in a database are related ................................................... 534
How the columns in a table are defined ..................................................... 536
The design of the MMABooks database .................................................... 538
How to use SQL to work with a relational database ...............540
How to query a single table..................................................540
How to join data from two or more tables ............................542
How to add, update, and delete data in a table ......................544

An introduction to ADO.NET ................................................546
The .NET data providers ..........................................................546
How the basic ADO.NET components work ..............................548
Concurrency and the disconnected data architecture .................550
How a dataset is organized .....................................................552
How to work with data without using a data adapter .................554
Two ways to create ADO.NET objects ......................................556

Chapter 18 How to work with data sources and datasets

How to create a data source ....................................................560
How to use the Data Sources window .....................................560
How to start the Data Source Configuration Wizard.................562
How to choose a data source type ..........................................562
How to choose the database model for a data source ...............564
How to choose the connection for a data source ......................564
How to create a connection to a database ...............................566
How to save a connection string in the app.config file ..............568
How to choose database objects for a data source ....................570
The schema file created by the Data Source Configuration Wizard 572

How to use a data source ....................................................574
How to generate a DataGridView control from a data source ....574
A Product Maintenance application that uses a DataGridView control 576
How to change the controls associated with a data source .........578
How to generate detail controls from a data source .................580
A Customer Maintenance application that uses TextBox controls 582

How to handle data errors ....................................................584
How to handle data provider errors .......................................584
How to handle ADO.NET errors .............................................586
How to handle data errors for a DataGridView control ............588

How to use the Dataset Designer .........................................590
How to view the schema for a dataset ....................................590
How to use the Query Builder .................................................592
How to preview the data for a query ......................................594
How to interpret the generated SQL statements .....................596

Chapter 19 How to work with bound controls and parameterized queries

How to work with bound text boxes and combo boxes ............602
How to format the data displayed in a text box .......................602
How to bind a combo box to a data source .............................604
How to use code to work with a binding source .....................606

How to work with parameterized queries ..............................608
How to create a parameterized query ....................................608
How to use code to work with a parameterized query ..............610

How to work with the ToolStrip control ..............................612
How to use the Items Collection Editor ..................................612
How to code an event handler for a ToolStrip item .................614
An enhanced Customer Maintenance application .................. 616
The user interface ........................................................................................................ 616
The code ...................................................................................................................... 616

How to work with a DataGridView control ................................. 620
How to modify the properties of a DataGridView control .................. 620
How to edit the columns of a DataGridView control .................... 622
How to format the data in the columns of a DataGridView control .......................... 624
How to use a DataGridView control to create a Master/Detail form .......................... 626

A Customer Invoice Display application ................................. 628
The user interface ........................................................................................................ 628
The dataset schema ..................................................................................................... 628
The code for the Customer Invoices form ................................................................. 628

Chapter 20 How to use ADO.NET
to write your own data access code
How to work with connections and commands ...................... 638
How to create and work with connections .............................................. 638
How to create and work with commands ............................................ 640

How to create and work with parameters ................................. 642
How to use parameters in SQL statements ........................................ 642
How to create parameters ...................................................................................... 644
How to work with parameters ................................................................. 646

How to execute commands ........................................................ 648
How to create and work with a data reader ........................................ 648
How to execute queries that return a single value ............................... 650
How to execute action queries ................................................................. 650

A Customer Maintenance application that uses commands ....... 652
The user interface ........................................................................................................ 652
The class diagram for the business and database classes .................. 654
The code for the CustomerDB class ................................................................. 656
The code for the StateDB class ................................................................. 662
The code for the MMABooksDB class ......................................................... 662
The code for the Customer Maintenance form ............................................. 664
The code for the Add/Modify Customer form ........................................... 670

Section 5 More skills for working with data

Chapter 21 How to work with files and data streams
An introduction to the System.IO classes ................................. 680
The classes for managing directories, files, and paths ........................... 680
How files and streams work ................................................................. 682
How to use the FileStream class ................................................................. 684
How to use the exception classes for file I/O ........................................ 686

How to work with text files ................................................................. 688
How to write a text file ....................................................................................... 688
How to read a text file ....................................................................................... 690
A class that works with a text file ................................................................. 692

How to work with binary files ................................................................. 694
How to write a binary file ....................................................................................... 694
How to read a binary file ....................................................................................... 696
A class that works with a binary file ................................................................. 698
Chapter 22  How to work with XML files

An introduction to XML ................................................................. 702
An XML document ........................................................................ 702
XML tags, declarations, and comments ...................................... 704
XML elements .............................................................................. 704
XML attributes ............................................................................ 706

How to work with the XML Editor ............................................ 708
How to create a new XML file .................................................... 708
How to open an existing XML file .............................................. 708
How to edit an XML file ............................................................ 708

How to work with XML ............................................................. 710
How to use the XmlWriter class ................................................. 710
Code that writes an XML document ........................................... 712
How to use the XmlReader class ............................................... 714
How the XmlReader class reads nodes ...................................... 716
Code that reads an XML document ............................................ 718
A class that works with an XML file ........................................... 718

Chapter 23  How to use LINQ

Basic concepts for working with LINQ ..................................... 724
How LINQ is implemented ....................................................... 724
Advantages of using LINQ ......................................................... 724
The three stages of a query operation ......................................... 726

How to code query expressions ................................................. 728
How to identify the data source for a query ......................... 728
How to filter the results of a query ........................................ 730
How to sort the results of a query .......................................... 732
How to select fields from a query ........................................... 734
How to join data from two or more data sources ..................... 736

How to use extension methods and lambda expressions .......... 738
How extension methods work .................................................. 738
Extension methods used to implement LINQ functionality .... 738
How lambda expressions work ................................................. 740
How to use lambda expressions with extension methods ....... 740

A Customer Invoice application that uses generic lists .......... 742
The user interface ...................................................................... 742
The code for the form ............................................................... 744

A Customer Invoice application that uses a typed dataset ...... 746
The dataset schema .................................................................. 746
The code for the form ............................................................... 748

Chapter 24  How to use the Entity Framework

How to create an Entity Data Model ......................................... 754
How the Entity Framework works ............................................. 754
How to start an Entity Data Model with the Entity Data Model Wizard .............................................. 756
How to choose the Entity Framework version ......................... 758
How to choose the database objects ........................................ 758
The Entity Data Model in the Entity Data Model Designer ....... 760

How to use the Entity Data Model Designer ......................... 762
Basic skills for using the designer ............................................ 762
How to use the Model Browser window ................................. 764
How to use the Mapping Details window ............................... 766
Section 6  Enhancement and deployment

Chapter 25  How to enhance the user interface

Two types of user interfaces ......................................................... 800
A single-document interface (SDI) ................................................ 800
A multiple-document interface (MDI) ............................................. 800

How to develop SDI applications .............................................. 802
How to use a startup form .......................................................... 802
How to use a Tab control ............................................................ 804

How to add menus to a form ...................................................... 806
How to create menus ................................................................. 806
How to set the properties that work with menu items ................. 808
How to write code that works with menu items ......................... 808

How to develop MDI applications ............................................. 810
How to create parent and child forms ....................................... 810
How to write code that works with parent and child forms .......... 812

How to add toolbars to a form .................................................. 814
How to create a toolbar ............................................................. 814
How to write code that works with toolbars .............................. 816

How to add help information .................................................... 818
How to add tool tips ................................................................. 818
How to add context-sensitive help ............................................. 818

Chapter 26  How to deploy an application

An introduction to deploying Windows applications .................. 824
How XCopy works ................................................................. 824
How ClickOnce works ............................................................ 824
How a Setup program works .................................................... 824

How to use XCopy ................................................................. 826
How to create a release build .................................................... 826
How to copy the release build to the client machine ................. 826
## How to use ClickOnce

- How to publish an application
- How to select the files that are published
- How to select the prerequisites
- How to set the update options
- How to set the publish options
- How to install an application
- How to update an application

## How to create and use a Setup program

- How to create an InstallShield project
- How to use the InstallShield Project Assistant
- How to add output files to an InstallShield project
- How to create and view the installation files for a Setup program
- How to use a Setup program to install an application

## How to deploy database applications

- Using ClickOnce deployment
- Using a Setup program

## Appendix A How to install and use the software for this book

- How to use the downloadable files
- How to install Visual Studio 2015
- How to use the MMABooks database
