# Expanded contents

## Section 1 An introduction to SQL

### Chapter 1 An introduction to relational databases and SQL

- An introduction to client/server systems ........................................... 4
  - The hardware components of a client/server system .......................... 4
  - The software components of a client/server system .......................... 6
  - Other client/server architectures .................................................... 8

- An introduction to the relational database model .............................. 10
  - How a table is organized ............................................................... 10
  - How tables are related ................................................................. 12
  - How columns in a table are defined ............................................. 14

- An introduction to SQL and SQL-based systems ............................ 16
  - A brief history of SQL .................................................................. 16
  - A comparison of Oracle, DB2, Microsoft SQL Server, and MySQL ..... 18

- The SQL statements ......................................................................... 20
  - An introduction to the SQL statements ........................................... 20
  - How to work with database objects .............................................. 22
  - How to query a single table ............................................................ 24
  - How to join data from two or more tables .................................... 26
  - How to add, update, and delete data in a table .............................. 28
  - How to work with views ............................................................... 30
  - SQL coding guidelines ................................................................. 32

- An introduction to PL/SQL ............................................................... 34
  - How to work with stored procedures .............................................. 34
  - How to work with user-defined functions .................................... 36
  - How to work with triggers ............................................................. 36

- How to use SQL from an application program ............................... 38
  - Three data access models ............................................................... 38
  - Java code that retrieves data from an Oracle database .................. 40

### Chapter 2 How to use Oracle SQL Developer and other tools

- How to work with an Oracle database .......................................... 48
  - How to start and stop the database service .................................... 48
  - How to use the Database Home Page .......................................... 50
  - How to use SQL*Plus ................................................................. 52

- How to use SQL Developer to work with a database ....................... 54
  - How to create a database connection ............................................. 54
  - How to export or import database connections .............................. 54
  - How to navigate through the database objects .............................. 56
  - How to view the column definitions for a table ............................ 58
  - How to view the data for a table .................................................. 58
  - How to edit the column definitions ............................................. 60

- How to use SQL Developer to run SQL statements ....................... 62
  - How to enter and execute a SQL statement .................................. 62
  - How to work with the Snippets window ...................................... 64
  - How to handle syntax errors ....................................................... 66
  - How to open and save SQL statements ....................................... 68
  - How to enter and execute a SQL script ...................................... 70
Section 2 The essential SQL skills

Chapter 3 How to retrieve data from a single table

An introduction to the SELECT statement .......................................................... 80
The basic syntax of the SELECT statement ..................................................... 80
SELECT statement examples ......................................................................... 82

How to code the SELECT clause ................................................................. 84
How to code column specifications ............................................................... 84
How to name the columns in a result set ..................................................... 86
How to code string expressions ................................................................. 88
How to code arithmetic expressions ......................................................... 90
How to use scalar functions ...................................................................... 92
How to use the Dual table ........................................................................... 94
How to use the DISTINCT keyword to eliminate duplicate rows ................. 96
How to use the ROWNUM pseudo column to limit the number of rows ......... 98

How to code the WHERE clause ................................................................. 100
How to use the comparison operators ......................................................... 100
How to use the AND, OR, and NOT logical operators .................................. 102
How to use the IN operator ........................................................................ 104
How to use the BETWEEN operator .......................................................... 106
How to use the LIKE operator .................................................................. 108
How to use the IS NULL condition ............................................................ 110

How to code the ORDER BY clause.............................................................. 112
How to sort a result set by a column name ................................................ 112
How to sort a result set by an alias, an expression, or a column number .... 114

How to code the row limiting clause ........................................................... 116
How to limit the number of rows ............................................................... 116
How to return a range of rows .................................................................. 116

Chapter 4 How to retrieve data from two or more tables

How to work with inner joins ..................................................................... 122
How to code an inner join ......................................................................... 122
When and how to use table aliases ............................................................ 124
How to work with tables from different schemas ...................................... 126
How to use compound join conditions ..................................................... 128
How to use a self-join ................................................................................ 130
Inner joins that join more than two tables .............................................. 132
How to use the implicit inner join syntax ................................................ 134

How to work with outer joins .................................................................... 136
How to code an outer join ......................................................................... 136
Outer join examples .................................................................................. 138
Outer joins that join more than two tables .............................................. 140
How to use the implicit outer join syntax ................................................ 142

Other skills for working with joins ............................................................. 144
How to combine inner and outer joins ...................................................... 144
How to join tables with the USING keyword .......................................... 146
How to join tables with the NATURAL keyword ...................................... 148
How to use cross joins .............................................................................. 150
How to work with unions

The syntax of a union ............................................................... 152
Unions that combine data from different tables ...................... 152
Unions that combine data from the same table ....................... 154
How to use the MINUS and INTERSECT operators .................. 156

Chapter 5  How to code summary queries

How to work with aggregate functions ..................................... 162
How to code aggregate functions ............................................. 162
Queries that use aggregate functions ..................................... 164

How to group and summarize data ........................................... 166
How to code the GROUP BY and HAVING clauses .................... 166
Queries that use the GROUP BY and HAVING clauses ............... 168
How the HAVING clause compares to the WHERE clause ........... 170
How to code complex search conditions ................................. 172

How to summarize data using Oracle extensions ..................... 174
How to use the ROLLUP operator ............................................ 174
How to use the CUBE operator .............................................. 176

Chapter 6  How to code subqueries

An introduction to subqueries ................................................ 182
How to use subqueries .......................................................... 182
How subqueries compare to joins ......................................... 184

How to code subqueries in search conditions ......................... 186
How to use subqueries with the IN operator ............................ 186
How to compare the result of a subquery with an expression ...... 188
How to use the ALL keyword ................................................ 190
How to use the ANY and SOME keywords .............................. 192
How to code correlated subqueries ...................................... 194
How to use the EXISTS operator ........................................... 196

Other ways to use subqueries ................................................. 198
How to code subqueries in the FROM clause ......................... 198
How to code subqueries in the SELECT clause ....................... 200

Guidelines for working with complex queries ......................... 202
A complex query that uses subqueries ................................... 202
A procedure for building complex queries .............................. 204

Two more skills for working with subqueries .......................... 206
How to code a subquery factoring clause ............................... 206
How to code a hierarchical query ........................................... 208

Chapter 7  How to insert, update, and delete data

How to create test tables ....................................................... 214
How to create the tables for this book .................................... 214
How to create a copy of a table ............................................. 214

How to commit and rollback changes ..................................... 216
How to commit changes ........................................................ 216
How to rollback changes ..................................................... 216

How to insert new rows ....................................................... 218
How to insert a single row .................................................... 218
How to insert default values and null values ......................... 220
How to use a subquery to insert multiple rows ....................... 222
Chapter 10 How to create tables, indexes, and sequences

How to work with tables ................................................................. 314
How to create a table .................................................................. 314
How to code a primary key constraint ........................................ 316
How to code a foreign key constraint ........................................... 318
How to code a check constraint .................................................. 320
How to alter the columns of a table ............................................ 322
How to alter the constraints of a table ........................................ 324
How to rename, truncate, and drop a table ................................. 326

How to work with indexes .......................................................... 328
How to create an index ............................................................... 328
How to drop an index ................................................................. 328

How to work with sequences ..................................................... 330
How to create a sequence .......................................................... 330
How to use a sequence .............................................................. 330
How to alter a sequence ............................................................ 332
How to drop a sequence ............................................................ 332

The script used to create the AP tables ....................................... 334
An introduction to scripts .......................................................... 334
How the DDL statements work .................................................. 334

How to automatically generate ID values ................................... 340
How to use a sequence as a default value ................................. 340
How to use the GENERATED clause ......................................... 340

How to use SQL Developer .......................................................... 342
How to work with the columns of a table ................................. 342
How to work with the data of a table .......................................... 342
How to work with the constraints of a table ............................... 344
How to work with indexes ....................................................... 346
How to work with sequences ..................................................... 348

Chapter 11 How to create views

An introduction to views ............................................................ 354
How views work ........................................................................ 354
Benefits of using views .............................................................. 356

How to work with views ............................................................ 358
How to create a view ................................................................. 358
How to create an updatable view ................................................ 362
How to create a read-only view .................................................. 362
How to use the WITH CHECK OPTION clause ............................ 364
How to insert or delete rows through a view ............................... 366
How to alter or drop a view ....................................................... 368

How to use SQL Developer ......................................................... 370
How to get information about a view ........................................ 370
How to drop a view ................................................................. 370
How to alter or create a view ..................................................... 370
Chapter 12  How to manage database security

An introduction to database security ..................................................374
How to create an admin user ............................................................ 374
How to use SQL Developer to view database objects for a schema .... 376
How to create end users ................................................................. 378
How to use SQL*Plus to test end users .......................................... 380
System privileges and object privileges ......................................... 382

How to manage database security ..................................................384
How to create, alter, and drop users ............................................... 384
How to create and drop roles ......................................................... 386
How to grant privileges ................................................................. 388
How to revoke privileges ............................................................... 390
How to work with private synonyms ............................................. 392
How to work with public synonyms .............................................. 394
A script that creates roles and users ............................................. 396
How to view the privileges for users and roles .............................. 400

How to use SQL Developer ...........................................................402
How to work with users ............................................................... 402
How to grant and revoke roles ..................................................... 404
How to grant and revoke system privileges ................................. 406

Section 4  The essential PL/SQL skills

Chapter 13  How to write PL/SQL code

An introduction to PL/SQL ...............................................................414
An anonymous PL/SQL block in a script ...................................... 414
A summary of statements for working with PL/SQL and scripts ....... 416

How to code the basic PL/SQL statements .................................418
How to print data to an output window ....................................... 418
How to declare and use variables ............................................... 420
How to code IF statements ......................................................... 422
How to code CASE statements ................................................... 424
How to code loops ...................................................................... 426
How to use a cursor ................................................................. 428
How to use collections .............................................................. 430
How to handle exceptions .......................................................... 434
A list of predefined exceptions .................................................. 436

Other scripting and PL/SQL skills .................................................438
How to drop database objects without displaying errors ............. 438
How to use bind variables .......................................................... 440
How to use substitution variables .............................................. 440
How to use dynamic SQL .......................................................... 442
How to run a script from a command line ................................. 444

Chapter 14  How to manage transactions and locking

How to work with transactions .....................................................452
How to commit and rollback transactions ................................... 452
How to work with save points .................................................... 454

How to work with concurrency and locking ..............................456
How concurrency and locking are related .................................. 456
The four concurrency problems that locks can prevent ............... 458
How to set the transaction isolation level ................................... 460
How to prevent deadlocks .......................................................... 462
### Chapter 15  How to create stored procedures and functions

**How to code stored procedures** ....................................................466
- How to create and call a stored procedure ..............................................466
- How to code input and output parameters ..............................................470
- How to code optional parameters ..........................................................472
- How to raise errors .................................................................474
- A stored procedure that inserts a row .................................................478
- A stored procedure that drops a table .................................................482
- How to drop a stored procedure ............................................................484

**How to code user-defined functions** ........................................ 486
- How to create and call a function ..........................................................486
- A function that calculates balance due .................................................488
- How to drop a function .................................................................490

**How to work with packages** .......................................................492
- How to create a package .......................................................................492
- How to drop a package .........................................................................494
- Advantages of packages .........................................................................494

**How to use SQL Developer** ..........................................................496
- How to view and drop procedures, functions, and packages .................496
- How to edit and compile procedures and functions ................................498
- How to grant and revoke privileges ..........................................................498
- How to debug procedures and functions .................................................500

### Chapter 16  How to create triggers

**How to work with triggers** ..............................................................508
- How to create a BEFORE trigger for a table ............................................508
- How to use a trigger to enforce data consistency ......................................510
- How to use a trigger to work with a sequence ........................................512
- How to create an AFTER trigger for a table .............................................514
- How to use an INSTEAD OF trigger for a view .........................................516
- How to use a trigger to work with DDL statements ...................................518
- How to use a trigger to work with database events ...................................518
- How to enable, disable, rename, or drop a trigger .....................................520

**Other skills for working with triggers** ............................................522
- How to code a compound trigger ............................................................522
- A trigger that causes the mutating-table error ........................................524
- How to solve the mutating-table problem ...............................................526

**How to use SQL Developer** ..........................................................528
- How to view, rename, or drop a trigger ..................................................528
- How to enable or disable a trigger ............................................................528
- How to edit a trigger ................................................................................530
- How to debug a trigger ............................................................................530

### Section 5  Advanced data types

### Chapter 17  How to work with timestamps and intervals

**An introduction to time zones** ..........................................................536
- Database time zone vs. session time zone .............................................536
- How to change the default date format ...................................................538
- How to change the default time zone .......................................................538
- Session settings vs. database settings ....................................................538
- How to use functions to work with time zones .......................................540
<table>
