Expanded contents

Section 1 Introduction to Visual Basic programming

Chapter 1 How to get started with Visual Studio

An introduction to .NET development ..............................................4
.NET applications ..................................................................................4
Visual Studio and the .NET programming languages ................................6
The .NET Framework ............................................................................8
The Visual Studio IDE .........................................................................10
How a Visual Basic application is compiled and run ...........................12
How Visual Basic differs from the other .NET languages .....................12

A tour of the Visual Studio IDE ..........................................................14
How to start Visual Studio ....................................................................14
How to open or close an existing project ...............................................16
Some possible menu variations ..........................................................16
How to use the Form Designer ............................................................18
How to use the Code Editor .................................................................20
How to use the Solution Explorer .......................................................22
How to work with Visual Studio's windows .........................................24

How to test a project ...........................................................................26
How to build a project ..........................................................................26
How to run a project ............................................................................26

How to upgrade projects
and change .NET Framework versions .............................................28
How to upgrade projects created in earlier versions of Visual Basic .......28
How to change the .NET Framework version used by a project ..........30

Chapter 2 How to design a Windows Forms application

How to set options and create a new project .......................................36
How to set the Visual Studio options ..................................................36
How to change the environment settings ..............................................36
How to create a new project ...............................................................38

How to design a form .........................................................................40
The design of the Invoice Total form ..................................................40
How to add controls to a form ............................................................42
How to set properties .........................................................................44
Common properties for forms and controls .........................................46
How to add navigation features ..........................................................48
The property settings for the Invoice Total form ..................................50
How to use Document Outline view ....................................................50

How to name and save the files of a project .......................................52
How to name the files of a project ......................................................52
How to save the files of a project .......................................................52

Chapter 3 How to code and test a Windows Forms application

An introduction to coding .................................................................58
Introduction to object-oriented programming ....................................58
How to refer to properties, methods, and events ...............................60
How an application responds to events ..............................................62
Section 2 The Visual Basic language essentials

Chapter 4  How to work with numeric and string data

How to work with the built-in value types .............................................................. 106
The built-in value types ......................................................................................... 106
How to declare and initialize variables ................................................................. 108
How to declare and initialize constants ................................................................. 110
How to code arithmetic expressions ..................................................................... 112
How to code assignment statements .................................................................... 114
How to work with the order of precedence........................................................... 116
How to use casting .................................................................................................. 118
How to change the type semantics ........................................................................ 120
How to use the Math class .................................................................................... 122

How to work with strings ..................................................................................... 124
How to declare and initialize a string ..................................................................... 124
How to join and append strings .............................................................................. 124

How to convert data types .................................................................................... 126
The .NET structures and classes that define data types ......................................... 126
How to use Visual Basic functions to convert data types ...................................... 128
How to use methods of the .NET data structures to convert data types ................ 130
How to use methods of the Convert class to convert data types ............................ 132
How to use three of the formatting functions ....................................................... 134
How to use methods to convert numbers to formatted strings ............................. 136

Three more skills for working with data ............................................................ 138
How to work with scope ....................................................................................... 138
How to declare and use enumerations ................................................................. 140
How to work with nullable types .......................................................................... 142
Two versions of the Invoice Total application......................... 144
The basic Invoice Total application ............................................. 144
The enhanced Invoice Total application......................................... 146

Chapter 5  How to code control structures
How to code Boolean expressions .............................................. 152
How to use the relational operators ........................................... 152
How to use the logical operators ............................................... 154
How to code conditional statements ........................................... 156
How to code If statements ...................................................... 156
How to code Select Case statements ................................. 158
An enhanced version of the Invoice Total application ................. 160
How to code loops .................................................................. 162
How to code For loops .......................................................... 162
How to code Do loops ......................................................... 164
How to use Exit and Continue statements ............................. 166
Debugging techniques for programs with loops...................... 168
The Future Value application................................................. 170
The design and property settings for the form ......................... 170
The code for the form ......................................................... 172

Chapter 6  How to code procedures and event handlers
How to code and call procedures ............................................ 178
How to code Sub procedures .................................................. 178
How to call Sub procedures ................................................. 180
When and how to pass arguments by reference and by value ........ 182
How to code and call Function procedures .......................... 184
How to use optional parameters .............................................. 186
How to use refactoring to create a new procedure and its calling statement ...... 188
How to work with events ...................................................... 190
How to start an event handler for any event ......................... 190
How to handle multiple events with one event handler ......... 192
How to use the Code Editor to start an event handler ............... 194
How to add and remove event wiring ..................................... 196
Another version of the Future Value application ................. 198
The Function procedure ....................................................... 198
The event handlers ............................................................ 198

Chapter 7  How to handle exceptions and validate data
An introduction to data validation and exception handling .......... 204
How to use the IsNumeric function for data validation .......... 204
How to display a dialog box for error messages .................. 206
How exception handling works ............................................. 208
How to use structured exception handling .......................... 210
How to catch an exception ...................................................... 210
How to use the properties and methods of an exception ....... 212
How to catch specific types of exceptions ......................... 214
How to throw an exception ................................................. 216
The Future Value application with exception handling .......... 218
How to validate data .......................................................... 220
How to validate a single entry .............................................. 220
How to use generic procedures to validate an entry .............. 222
How to validate multiple entries .......................................... 224
Chapter 8 How to work with arrays and collections

How to work with one-dimensional arrays..........................238
How to create an array ..................................................238
How to assign values to the elements of an array ..........240
How to use For loops to work with arrays ..................242
How to use For Each loops to work with arrays ............244

How to work with rectangular arrays ............................246
How to create a rectangular array ..................................246
How to assign values to a rectangular array .................246
How to work with rectangular arrays .........................248

How to work with jagged arrays ...................................250
How to create a jagged array ........................................250
How to assign values to a jagged array ......................250
How to work with jagged arrays .................................252

More skills for working with arrays .............................254
How to use the Array class ...........................................254
How to refer to, copy, and resize arrays ......................256
How to code procedures that work with arrays ...........258
How to use the null-conditional operator ....................260

How to work with collections .......................................262
Commonly used collection classes ...............................262
Typed vs. untyped collections .......................................264
How to work with a list .................................................266
How to work with a sorted list ......................................270
How to work with queues and stacks .........................274
How to work with an array list .....................................276

Chapter 9 How to work with dates and strings

How to work with dates and times .................................282
How to create a DateTime value ..................................282
How to get the current date and time ..........................284
How to format DateTime values ..................................284
How to get information about dates and times ............286
How to perform operations on dates and times ............288
How to use Visual Basic properties and functions to work with dates and times ...290

How to work with strings .............................................292
The properties and methods of the String class ..........292
Code examples that work with strings .........................294
More examples that work with strings .......................296
How to use the Parse and TryParse methods to validate numeric entries .......298
How to use the StringBuilder class .........................300
How to use Visual Basic functions to work with strings ....302

How to format numbers, dates, and times ...................304
How to format numbers ..............................................304
How to format dates and times ..................................306
How to use interpolated strings .................................308
Chapter 10  More skills for working with Windows forms and controls

How to work with controls .............................................................314
Five more types of controls ............................................................314
How to work with combo boxes and list boxes ................................316
How to work with check boxes and radio buttons ............................320
How to work with group boxes .....................................................320
How to use Tab Order view to set the tab order ...............................322
How to get the information you need for using a control ..................324

How to work with multi-form projects ........................................326
How to add a form to a project .....................................................326
How to rename a form ..................................................................326
How to change the startup form for a project .................................328
How to display a form as a dialog box ..........................................330
How to pass data between a form and a custom dialog box ..............332

How to use the MessageBox class ...............................................334
How to display a dialog box and get the user response ....................334
How to use the FormClosing event ...............................................336

The Payment application ............................................................338
The operation ................................................................................338
The property settings ....................................................................340
The code for the Customer form ..................................................340
The code for the Payment form ....................................................344

Chapter 11  How to create and use classes

An introduction to classes ............................................................352
How classes can be used to structure an application .........................352
The members you can define within a class ....................................354
The code for the Product class .....................................................356
How instantiation works ................................................................358

How to create a class .................................................................360
How to add a class file to a project ..............................................360
How to code fields ........................................................................362
How to code standard properties ..................................................364
How to code auto-implemented properties .....................................366
How to code methods ...................................................................368
How to code constructors ............................................................370
How to code shared members ......................................................372
How to generate code stubs ..........................................................374

The Product Maintenance application .........................................376
The operation of the Product Maintenance application ....................376
The classes used by the Product Maintenance application ..............378
The code for the Product Maintenance application .......................380

How to browse, diagram, and display and edit classes ..............384
How to browse the classes in a solution .......................................384
How to use class diagrams and the Class Details window ..............386
How to use the Peek Definition window .......................................388

How to work with structures .......................................................390
How to create a structure ............................................................390
How to use a structure ..................................................................392
Chapter 12  How to debug an application

Basic debugging techniques .........................................................398
How to set the debugging options ...................................................398
How to work in break mode .............................................................400
How to use the Edit and Continue feature ......................................400
How to work with data tips .............................................................402
How to use breakpoints .................................................................404
How to control the execution of an application .............................406

How to use the debugging windows ..........................................408
How to use the Locals window to monitor variables .......................408
How to use the Autos window to monitor variables .......................408
How to use Watch windows to monitor expressions .....................410
How to use the Immediate window to execute commands ............412
How to use the Call Stack window to monitor called procedures ...414
How to use the Call Hierarchy window to navigate through your code 416
How to use the Output or Immediate window to get build or debugging information .........................................................418
How use the Visualizer dialog boxes to view strings .....................420

Section 3  Database programming

Chapter 13  An introduction to database programming

An introduction to client/server systems .................................428
The hardware components of a client/server system ..................428
The software components of a client/server system ....................430

An introduction to relational databases .....................................432
How a table is organized ...............................................................432
How the tables in a database are related .....................................434
How the columns in a table are defined .......................................436
The design of the MMABooks database .....................................438

How to use SQL to work with a relational database ................440
How to query a single table .........................................................440
How to join data from two or more tables ...................................442
How to add, update, and delete data in a table .........................444

An introduction to ADO.NET .......................................................446
The .NET data providers ..............................................................446
How the basic ADO.NET components work ...............................448
Concurrency and the disconnected data architecture ..................450
How a dataset is organized ..........................................................452
How to work with data without using a data adapter .................454
Two ways to create ADO.NET objects .........................................456

Chapter 14  How to work with data sources and datasets

How to create a data source .......................................................460
How to use the Data Sources window .........................................460
How to start the Data Source Configuration Wizard ........................462
How to choose a data source type .................................................462
How to choose the database model for a data source ..................464
How to choose the connection for a data source .........................464
How to create a connection to a database ..................................466
How to save a connection string in the App.config file ................468
How to choose database objects for a data source ....................470
The schema file created by the Data Source Configuration Wizard 472
How to use a data source ............................................................... 474
How to generate a DataGridView control from a data source .......... 474
A Product Maintenance application that uses a DataGridView control ......... 476
How to change the controls associated with a data source ................. 478
How to generate detail controls from a data source ......................... 480
A Customer Maintenance application that uses TextBox controls .......... 482

How to handle data errors .............................................................. 484
How to handle data provider errors ............................................. 484
How to handle ADO.NET errors ................................................... 486
How to handle data errors for a DataGridView control .................... 488

How to use the Dataset Designer .................................................. 490
How to view the schema for a dataset .......................................... 490
How to use the Query Builder ....................................................... 492
How to preview the data for a query ............................................ 494
How to interpret the generated SQL statements .............................. 496

Chapter 15 How to work with bound controls and parameterized queries

How to work with bound text boxes and combo boxes ..................... 502
How to format the data displayed in a text box ................................. 502
How to bind a combo box to a data source .................................... 504
How to use code to work with a binding source .............................. 506

How to work with parameterized queries ....................................... 508
How to create a parameterized query ........................................... 508
How to use code to work with a parameterized query ...................... 510

How to work with the ToolStrip control ........................................ 512
How to use the Items Collection Editor ........................................ 512
How to code an event handler for a ToolStrip item ...................... 514

An enhanced Customer Maintenance application .......................... 516
The user interface ........................................................................ 516
The code .................................................................................... 516

How to work with a DataGridView control .................................... 520
How to modify the properties of a DataGridView control .................. 520
How to edit the columns of a DataGridView control ...................... 522
How to format the data in the columns of a DataGridView control ....... 524
How to use a DataGridView control to create a Master/Detail form .... 526

A Customer Invoice Display application ........................................ 528
The user interface ........................................................................ 528
The dataset schema ...................................................................... 528
The code for the Customer Invoices form ..................................... 528

Chapter 16 How to use ADO.NET to write your own data access code

How to work with connections and commands .............................. 538
How to create and work with connections ..................................... 538
How to create and work with commands ....................................... 540

How to create and work with parameters ..................................... 542
How to use parameters in SQL statements .................................... 542
How to create parameters ......................................................... 544
How to work with parameters .................................................... 546
## Chapter 19 How to work with interfaces and generics

### How to work with interfaces
- An introduction to interfaces .......................................................... 642
- Some of the interfaces defined by the .NET Framework .................. 644
- How to create an interface ................................................................. 646
- How to implement an interface ......................................................... 648
- A Product class that implements the ICloneable interface ............... 650
- How to use an interface as a parameter ............................................ 652

### How to work with generics
- How to code a class that defines a generic collection ....................... 654
- Some of the generic interfaces defined by the .NET Framework ......... 658
- How to implement the IComparable() interface ............................... 660
- How to use constraints ..................................................................... 662
- How to code an interface that uses generics .................................... 664

## Chapter 20 How to organize and document your classes

### How to organize your classes
- How to code multiple classes in a single file .................................... 670
- How to split a single class across multiple files ............................... 672
- How to work with namespaces ......................................................... 674

### How to document your classes
- How to add XML documentation to a class ..................................... 676
- How to view the XML documentation ............................................... 678

### How to create and use class libraries
- How class libraries work ................................................................. 680
- How to create a class library project ............................................... 682
- How to add a reference to a class library ........................................... 684
- How to use the classes in a class library .......................................... 684

## Section 5 More skills for working with data

### Chapter 21 How to work with files and data streams
- An introduction to the System.IO classes ....................................... 690
- The classes for managing directories, files, and paths ..................... 690
- How files and streams work ............................................................ 692
- How to use the FileStream class .................................................... 694
- How to use the exception classes for file I/O ................................. 696
- How to use the My.Computer.FileSystem object ............................... 698

### How to work with text files
- How to write a text file .................................................................... 700
- How to read a text file ..................................................................... 702
- A class that works with a text file .................................................... 704

### How to work with binary files
- How to write a binary file ............................................................... 706
- How to read a binary file ............................................................... 708
- A class that works with a binary file ................................................. 710
Chapter 22  How to work with XML files

An introduction to XML ................................................................. 714
An XML document ........................................................................ 714
XML tags, declarations, and comments ....................................... 716
XML elements ............................................................................. 716
XML attributes ........................................................................... 718

How to work with the XML Editor ........................................... 720
How to create a new XML file .................................................. 720
How to open an existing XML file .............................................. 720
How to edit an XML file ............................................................ 720

How to work with XML ............................................................. 722
How to use the XmlWriter class ............................................... 722
Code that writes an XML document ......................................... 724
How to use the XmlReader class ............................................... 726
How the XmlReader class reads nodes .................................... 728
Code that reads an XML document ......................................... 730
A class that works with an XML file ........................................ 732

Chapter 23  How to use LINQ

Basic concepts for working with LINQ .................................... 736
How LINQ is implemented ..................................................... 736
Advantages of using LINQ ..................................................... 736
The three stages of a query operation ....................................... 738

How to code query expressions .............................................. 740
How to identify the data source for a query ......................... 740
How to filter the results of a query .......................................... 742
How to sort the results of a query ........................................... 744
How to select fields from a query .......................................... 746
How to join data from two or more data sources .................. 748

How to use extension methods and lambda expressions ........ 750
How extension methods work ............................................... 750
Extension methods used to implement LINQ functionality .... 750
How lambda expressions work ............................................. 752
How to use lambda expressions with extension methods ...... 752

A Customer Invoice application that uses generic lists ......... 754
The user interface ................................................................. 754
The code for the form ............................................................. 756

A Customer Invoice application that uses a typed dataset .... 758
The dataset schema ............................................................... 758
The code for the form ............................................................. 760

Chapter 24  How to use the Entity Framework

How to create an Entity Data Model ....................................... 766
How the Entity Framework works ........................................... 766
How to start an Entity Data Model with the Entity Data Model Wizard ........................................... 768
How to choose the Entity Framework version ....................... 770
How to choose the database objects ..................................... 770
The Entity Data Model in the Entity Data Model Designer .... 772

How to use the Entity Data Model Designer ......................... 774
Basic skills for using the designer ........................................... 774
How to use the Model Browser window .............................. 776
How to use the Mapping Details window ......................... 778
